SUMMARY

Product-minded frontend engineer with 4+ years shipping customer-facing React/TypeScript, with full-stack range across Node.js and PHP. Owns features end-to-end — technical design, implementation, and production rollout.

WORK EXPERIENCE

Intuit Mailchimp

Software Engineer II

New York, NY

April 2023 - Present

- Shipped **SMS Age Gating** across three stacks (popup forms microfrontend in React/TypeScript/Redux, legacy Dojo forms, and Mailchimp monolith PHP controllers), unlocking compliant SMS marketing for a segment representing ~\$50M in ARR and recovering ~10% of monthly SMS rejections in v1 — authored the technical design and drove cross-team architecture decisions under strict legal constraint before integrating a partner team's REST API
- Lifted our customers' opt-in rates ~50% with **SMS Instant Opt-In**, replacing the legacy "Reply Y" step with an onsite verification flow — owned the frontend and ran the Optimizely A/B experiment, integrating with an existing eventBus pub/sub layer that bridged user actions and instrumentation across the popup forms microfrontend, Node.js microservices, and the Mailchimp monolith
- Built the **QBO Contact Forms** microfrontend (React/TypeScript) deployed to QuickBooks Online — one of three core engineers delivering a greenfield visual form builder in 3 months, activating 100K+ QBO merchants; owned the element panel end-to-end, including a drag-and-drop element library (React DnD), dynamic configuration UI, PHP backend data models, and designed REST APIs
- Designed and prototyped an internal LLM-powered knowledge engine that ingests merged PRs and linked Jira tickets into a searchable changelog with a RAG-based natural-language Q&A layer — demoed to engineering leadership as V1 of a broader internal AI platform
- Led an initiative to close end-to-end test coverage gaps (Playwright) across the Forms platform — scoped the work, authored the initial Playwright suite, and mentored a contract engineer through delivery, lifting coverage from 0% to 85%

PayPal

Full-Stack Software Engineer

New York, NY

July 2022 - February 2023

- Shipped **Google One-Tap** sign-up integration (React/TypeScript) in partnership with Google engineers to satisfy legal verification requirements, projected to add ~20,000 new merchants annually
- Diagnosed and fixed a cross-browser iframe sizing bug where Google's embedded iframe wasn't resizing with the viewport and was blocking user input on mobile — implemented a custom MutationObserver to track DOM resize events and apply dynamic iframe dimensions, unblocking the One-Tap launch
- Authored Jest test suite for the merchant onboarding flow and wired it into Jenkins CI, enabling automated test runs on every PR and lifting coverage ~40%

Avarint LLC

Software Engineer

Buffalo, NY

September 2021 - July 2022

- Rebuilt legacy aerospace defense modeling application **DIADS** as part of 7-person team using React and JavaScript, modernizing a 10-year-old codebase to transform the user experience for defense contractors
- Led landing page redesign, simplifying navigation and reducing new user onboarding time by 30%

TECHNICAL SKILLS

Frontend: React, Redux, TypeScript, JavaScript, Python, HTML/CSS, Accessibility, Web Performance, Microfrontends

Backend: Node.js, Express.js, PHP, RESTful APIs, Microservices

Tools & Practices: Git, AWS, Splunk, Jest, Playwright, Test-Driven Development, CI/CD, Event-driven architecture, A/B Testing

EDUCATION

University at Buffalo, the State University of New York

Bachelor of Science in Computer Science

Buffalo, NY

May 2021
